

## EE06 Series

### Small Size Transmitter for Humidity and Temperature

EE06 series are compact transmitters for humidity, and combined humidity/temperature measurement with excellent price / performance ratio.

They are optimised for OEM applications and available with or without housing. With appropriate filter cap EE06 can operate successfully even in harsh environments. The analogue output for both humidity and temperature is 0-1 V.

The temperature output signal can be active or passive. The very small dimensions, low energy consumption and supply voltages down to 4.5 V allow cost-effective and easy positioning of the transmitters.
